TEORÍA MUSICAL

Posiciones del trombón de varas (tenor, en Si♭): complétalas

Escribe en qué posición de la vara (1.ª a 7.ª) se toca cada nota: marca con un círculo ● la posición y anota el armónico. Las notas son las escritas.

Cada posición baja la nota un semitono. La nota concreta se elige además con el **armónico** (la posición de los labios): por eso la misma posición sirve para varias notas.

El trombón no transpone: lo escrito es lo que suena. **Fa♯ y Sol♭ son la misma nota**; por eso las alteradas llevan los dos nombres. Los subíndices son la octava.
